1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 33-44, drawn to a method of broadcasting advisories by detecting a transmission after a period of inactivity, classified in class 340, subclass 949.
 - II. Claims 45-51, drawn to a method of broadcasting information by detecting a password, classified in class 340, subclass 949.
 - III. Claims 52-56, drawn to a method of broadcasting advisories which includes a preferred runway based on weather conditions, classified in class 340, subclass 949.
 - IV. Claims 57-61, drawn to a method of tracking information by classifying broadcasts from other sources, classified in class 340, subclass 949.
 - V. Claims 62-64, drawn to a method of generating advisories by automatically broadcasting a weather advisory, classified in class 340, subclass 949.
2. Inventions I and II-V are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a method of broadcasting advisories by waiting for a transmission after a period of inactivity would not have required a password, preferred runway data, classification of broadcasts or automatic

Art Unit: 2636

broadcasts. The subcombination has separate utility such as password detection system, preferred runway guidance system, broadcast classification system or automatic broadcast system.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
